Covid-19 Disinfection / Decontamination treatment

We at Terminex are used to cleaning / treating hazardous areas and we can use our experience and expertise to clean and sanitize your workplace. We use Ultra-low volume (ULV) mist / fogging machines to generate a cloud of very fine droplets of a disinfectant liquid as well as spray treatments. This application of disinfectants and biocides using this method can significantly reduce the number of disease pathogens both on surfaces and in the air. It is safe to use on a wide range of surfaces including textiles. We use Bio -Ped spray and PX ULV disinfectant. Bio -Ped **ACTIVE INGREDIENT APPROVED FOR TREATMENT OF CORONAVIRUS**

Contains: 8% Benzalkonium Chloride

Bio-Rid is used to control the disease organisms associated with pest birds (ie Pigeons, Starlings, Sparrows gulls etc). It is intended to be used in areas where persons may come into contact with bird droppings, feathers, nesting materials and where birds nest or roost.

This product will kill bacteria, fungi protozoa, rickettsiales and viral organisms associated with birds which are related to diseases which can be transferred by pest birds to humans or other animals. Can also be used for Weils Disease and Canine Parvovirus.

PX ULV disinfectant - **Contains 6% Chlorhexidine and 8% w/w QAC.**

A liquid biocide for space-spray (ULV) application. Effective against bacteria, viruses and fungi. Specially formulated for use in human dwelling situations where rodent infestations and bird contaminated areas pose risks. For use at waste transfer stations and treatment facilities and similar location where health risks posed by bio-aerosols need to be controlled. Also for use in kennels, catteries, stables, poultry houses, trashed/flooded dwellings, drug users' habitats and other situations where biohazard risk has been identified.

Rapid ULV fogging and disinfection enables the treatment of large areas in a short space of time.

With building that have been left empty for a period of time there is also the risk that Rats Mice Cockroaches etc could have walked over worktops / desks etc and therefore contaminate them. These pests carry a number of disease organisms such as Salmonella Gastroenteritis etc and therefore we would recommend carrying out a disinfectant treatment prior to staff returning to kitchens / offices etc.

Please contact us on **01462 834466** and we would be pleased to carry out a survey / quotation for your premises.
